Your Point-of-Sale Solution

**Reliable, Easy to Use &
Completely Customizable**

FuturePOS®

Version 6

While other software companies have been cashing in on buzzwords, we took our nearly 20 years in the business and built the deepest, most comprehensive product to ever hit the market.

Future POS version 6 has several key features that helps distinguish it from the rest of the pack. Most legacy applications are starting to look outdated. All of the new tablet POS companies have cloud capabilities but offer minimal functionality/reliability. Future POS is providing the best of both worlds.
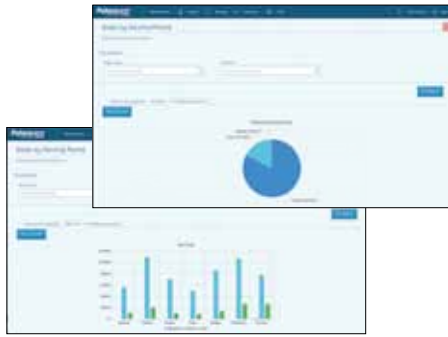

1 Web Browser Based Back Office

Version 6 has a Web Browser Based Back Office with a completely modern look and feel. Because it runs in a web browser instead of being a desktop application, it can be run on any device that supports web access. So managers aren't forced to go to the office or take control of a POS terminal to do a price change – it can be done from their phone or a tablet.

2

Data Analytics Tool

Another revolutionary feature of Version 6 is the Data Analytics Tool, or Report Writer. This allows drag and drop access to all of the data in Future POS and for the creation of custom reports and graphs. Never before has the customer had such a simple way to mine their data and use those newfound metrics to run their business more profitably.

System Wide Search Function

4

Version 6 has a System Wide Search Function. It makes finding any maintenance, report or inventory item as simple as using your web browser.

Advanced Theme Engine

3

The industry standard, rock solid Future POS Front End has been updated to use our new Advanced Theme Engine. This means that the entire look and feel of the Front End can easily be changed. In addition to custom themes that can be provided by the customer, there are also seasonal themes that change the look and feel of the popup windows based on what holiday is coming up.
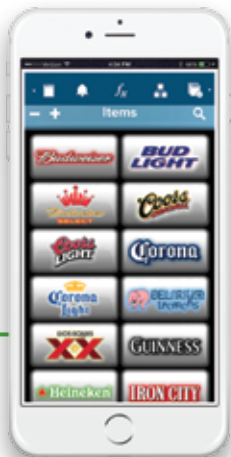

EMV

Unlike most POS systems that have no EMV solution or force you to use their one and only EMV solution, Future POS has several EMV options to fit your needs. Do you just want a simple and inexpensive EMV solution that allows you to avoid EMV chargebacks? We have that. Or would you prefer a more robust solution that can show the customer their check and prompt for a tip and signature? We can do that too. Need a state of the art tableside ordering solution with built in EMV and 3G failover? We're pretty much the only ones who can offer you that. When it comes to payment security, Future POS has always been an industry leader.

Handhelds and Mobile POS

Future POS handheld devices provide your workforce with increased efficiency and mobility while giving your customers faster service. Handheld devices are similar to a Future POS terminal, only portable. Our Mobile POS app runs on both Android and iOS devices. Our Mobile POS solution can also do EMV with support for ApplePay, Samsung Pay and Android Pay.

Surveillance with Text Insertion

When it comes to video surveillance, Future POS has the right size to fit your needs. Naturally we support standard DVRs with text insertion and managers can view video associated with POS activities with the click of a button. Where we blow the competition away is with our built in surveillance system that uses ordinary web cameras. For the price of a web cam you can eliminate buddy punching, view live cameras and monitor your business with event-driven video. Protect your business from fraud and theft by tracking important point-of-sale activities.

Multi-Column Modifiers

Here at Future POS we realize how important it is to get orders into the system fast and accurately. We have reduced ordering time and user error with our innovative feature we call "multi-column modifiers". Every option for an item can be found in one modifier window. No need to click from screen to screen or search for buttons on different menus. You see all of your modifier selections on one screen, and press "OK" only once, eliminating redundant keystrokes and reducing the likelihood of selecting the wrong modifier.

Digital Signage

Unlike other POS systems that have no Digital Signage capabilities or use a third party, Future POS's cutting edge digital signage module is included free of charge. It provides all of the features you would expect from an expensive digital signage system, including things like:

• Scheduled content to display advertisements, specials, movies and more in a customized playlist.

• Support for rear-facing displays or outside drive-thru displays with real-time output of sales information.

• Digital Menu Boards with features such as "live" menu updates via our user friendly, drag and drop interface to create customized layouts.

Kitchen Video Display Unit (VDU)

Reduce paper waste and provide faster order fulfillment by outputting orders to a Video Display Unit instead of a remote printer. This technology quickly displays orders to your kitchen staff, allowing you to reduce ticket times and to increase table turns. In addition to tracking prep times, a Kitchen VDU can also provide helpful preparation instructions for enhanced order accuracy.

Cloud Based Enterprise

Future POS offers you the power to control multiple business locations from a single site with our state-of-the-art Enterprise software. Analyze and share resources for various businesses from a central location. Stores using Enterprise can share customer information, gift certificates, sales information, items, buttons, menus and more.

Available 2017

All of the Features Your Customers are Demanding

- Labor Scheduling and Employee Timekeeping, which can be exported to numerous payroll companies and accounting packages
